2	It's not so much the speed that is important to me, it is the reliability. It's a disaster when the Internet is down. THANK YOU FOR ORGANISING THIS SURVEY.
7	Being able to participate in video conferencing would be a great advantage to communication/training/budget management.
8	Appreciate that for our type of business internet speeds are not critically important but understand that for some businesses it is critical therefore support the initiative wholeheartedly to improve provision
16	better service would allow us to support remote working more efficiently and effectively. we pay for 8Mb but only receive line quality for 4Mb at router.
17	We would like to offer wifi to the guests at the youth hostel but it's often a problem getting broadband from the exchange, and also if we ever get it then it's such a poor service that it's not acceptable to our guests as speeds are so slow.
19	Having better broadband to be able to operate day to day (current booking system is on line) as well as having sufficient capacity for guests is very important
23	We would like to have wireless internet in all our barges to allow more efficient communication, monitoring of the sites and time management for our staff. Faster broadband would allow us to access more online training for our staff and to potentially offer more diverse employment opportunities that are land based.
27	While we have entered 0 in the increase in employment box, we feel that while we probably couldn't offer direct employment we would potentially be able to bring more people into the island who would work remotely. We have already had one family with an IT business pull out of moving here because the new high speed link to Skerries has been repeatedly delayed.
28	Some days our internet connection is very slow, this doesn't appear to be based on time of day or day of the week. ALSO - comment re question 17 "what benefits would b.band provision at the speeds you require...." this person answered "online feed systems + data recording"
29	I have put no to the last question as I would need to know more about what is involved before I could make a decision.
31	Q.17 comments:- "Other" reduce time spent online
37	There's so many of the farming paperwork that is now done online ie registration of cattle births movements etc that a decent broadband service is crucial. We would also be able to make more of advertising our business if we had a decent service. We would also be able to take better advantage of online training etc.
39	We would like to be able to look into developing further advertising and marketing opportunities online but this is constrained by poor internet service. We are also interested in looking into an online booking system, but the internet connection must be more reliable for this.
41	unsure about investing in scheme
42	Q6. unable to change supplier as speed too low for my telephone company. Q16. Did not enter an answer on paper version - put 'up to 1' on online version. Comments:- the current arrangements are not adequate to enable a switch of supplier. This means that either I have to change my phone supplier to BT of miss out on a phone/broadband package - effectiely this operates in restraint of the free market in ICT Services
44	Q16. Paper copy I answered "Not sure", but had to choose an option on the online version - so chose up to 1Mbps
45	I would only be interested in investing in a community broadband scheme if it were to improve the service which I have at present
